Debt Praxis and Government

I, II, III

By Maurizio Lazzarato

I. The Debt Praxis of Governments in EU

When of course Sirohi is in India and developing correct Stieglitz economics which makes sure saving and expenditure is in fact the correct rate, the theory of debt in EU is maximal, that in fact it is machinic enslavement that passes into the process of austerity. The word austerity which is still active in EU is then a financial process of debt or Peso economics which means the same thing. It is in fact the process of extracting a surplus-value on the process of expenditure like the rate which is fixed at a transaction called ATM lines which are articulated to heavy financial lines.

II. Government in EU

Therefore Macron or even Nunes is in fact facing protests and large dynamics of mass resistance because the Communist Parties demand a correct rate theory, which means ethical rates in fact, which is measured by the Government in welfare policies in fact.

III. Debt Praxis in America

America has a similar policy called financial advisors who are then corporate machines which even develops in Europe and is then the monad which has profit as maximisable. In India, Sirohi is financial advisor and advises cheap use-value rates which then is Communism for Algeria and Cuba – to follow simple Paul life and its simple rates. This is what Sirohi meant in his Althusserian economic style – that a scale of finance is finally the scale of daily household economics and is overdetermined by praxis in India to join Communism. While Europe is a debt praxis machine.
